Farm animal proteomics, FAP

The COST Action on Farm Animal Proteomics (FA1002) was established in November 2010 to create a network of researchers with interest in the applications of proteomics to animal health, production and the processes related to post-harvest processing of food. Over the following four years the Action will achieve its objectives by holding a series of meetings and workshops where method protocols, sample preparation, technological advances and applications in farm animal production and food science can be discussed and coordinated.

The third meeting of Farm Animal Proteomics will take place in Košice, Slovakia, organized by University of veterinary medicine and pharmacy in Košice on the 25th and 26th of April 2013.
